GREEN IT

MAKE GREEN IT WORK FOR YOU

How can IT be made more sustainable in the face of rapid technological change?
And where should companies start if they want to bring about change?
As in almost all other sectors, sustainability begins at the procurement stage.
This checklist will help you to identify the potential for more sustainable IT:

Does your current procurement of IT hardware support a circular economy,
be it through purchase, rental, or leasing?

If you are renting or leasing hardware, does your provider have
sustainability commitments in place?

Is the carbon footprint of your assets properly managed?

Does your IT equipment meet your actual needs?

Does your IT estate management strike the right balance between
energy efficiency and cost efficiency?

Does your procurement strategy examine the full lifecycle of your equipment,
including end-of-life remarketing of hardware, and does it consider issues
of data protection and efficiency?

Does your lifecycle policy consider where end-of-life assets end up?

Do you have steps in place to ensure that end-of-life equipment is recycled properly?

Have you looked into carbon offsetting the CO_2 produced by your IT fleet?

CHG-MERIDIAN is a technology lifecycle management and financing company
that will partner with you for all matters concerning Green IT solutions. We support
our customers along the entire lifecycle of their technology assets, from rollout
and use, to certified data erasure, refurbishing, and remarketing. CHG-MERIDIAN
can ensure that the entire life cycle of your IT asset is as sustainable as it can be.

A huge step towards more sustainable business practices, for minimal effort.
Does that make good business sense?

Then go green! If you need support on this matter or have any further questions,
please contact **greenIT@chg-meridian.com**
